

# Surgery overview

- Goal: align  $l_1$  with  $l_2$  (Fig 1)
- Procedure: cut the tibia along the **red polyline** (Fig 1) and stretch the inner side of the calf with a height **H** to rotate the upper part of the tibia with an angle of **a** (Fig 2)
- The **yellow line** is the aim line for cutting (have to double check on which side they start to cut)
